

# TSB 8

Welcome to Dirigo Software's **TSB 8**.

**Technical Service Bulletin 8** is the *ENTIRE* NHTSA Technical Service Bulletin Database... all at your fingertips anytime day or night, 24 hours a day, 7 days a week. This is a **must have** product for pointing out and illustrating any known mechanical and/or safety trends and problems that may have contributed to the collision you are investigating.

We utilize the very latest in Windows database technology to create a very fast and efficient database program. There are **337,000+** TSBs in the database, at the time of this printing.

The database contains TSBs from 1952 through today, and cover such items as: cars, trucks, motorcycles, semi tractors, motor homes, passenger buses, school buses... if you can drive it and it is on our highways and there is a TSB on it, you will find it in this database!

The program creates extremely professional reports that can be printed to any Windows compatible printer. The reports that can be printed are: a single TSB, all TSBs for a particular make and model for a specific year, all TSBs for a particular make and model for any year, and all TSBs for a particular make and model from year X to year Y, and you can also limit the search to a

particular search word in the Component field or Summary field (i.e., steering).

The TSB database is updated weekly, and you can update **TSB 8** for FREE by downloading the updates from our web page. Updates can also be obtained on CD from Dirigo Software, for a small nominal fee per update.

**TSB 8** would be an excellent addition to your software library, and will come in very handy, many times. Order yours today!
